Subject: weekly item for American Lifan, Inc. seizure recommendation and exide

Hi Julie,

FYI. Here are two more weekly entries. Please let me know if you have any questions.

Thank you,

Matt

American Lifan, Inc. Seizure: The U.S. Environmental Protection Agency recommended that the U.S. Department of Homeland Security's Bureau of Customs and Border Protection (CBP) seize or export 40 Motorcycles imported on November 15, 2016, by American Lifan, Inc. through the Port of Long Beach. Based on physical inspection by EPA on November 30, 2016, it was determined that American Lifan, Inc. violated the Clean Air Act. . An EPA lab analyzed the samples and the design of the catalysts and precious metals ratios differed significantly from the COC application. (Andy Zellinger x23093)

Exide NESHAP Applicability Determination: The U.S. Environmental Protection Agency sent a letter to Exide (Vernon, California) to determine the National Emission Standards for Hazardous Air Pollutants from Secondary Lead Smelting (Subpart X) no longer applies. Exide has not operated any smelting equipment at the facility since March 2014 and has no plans to restart. EPA determined the facility is no longer a "secondary lead smelter" for purposes of Subpart X and, therefore, no longer an affected source under the rule. (Matt Salazar x23982)
